The Pynergon-Levi Systems

The Pynergon-Levi systems are a completely new technology, the objects of various kinds,

weightless, aesthetic and surreal.

They are an intelligent "eye-catcher" that attracts a lot of attention through individual lighting design and a suspension system.

The system is used wherever a real eye-catcher is required: at trade fairs and consumer fairs, in the POS area, shop windows, reception areas and many more.

It turns out that the use of Levis leads to a higher visitor frequency and an invigorating effect.

Not only the real floating alone fascinates the visitors, but above all the "flyers" that we individually adapt to the customer, the floating slides.

The systems are designed for continuous use. 24 hours a day, 365 days a year.

Overview:

- Intelligent and exclusive lighting system
- Surface with individual engraving of your logo
- Swiss wood from sustainably managed forests, which is processed to the highest quality.
- Indestructible materials from ecological raw materials
- Very simple and aesthetic design
- Individually developed microscope slides
- 2 years warranty on all parts
